

STRATEGIC OVERVIEW OF WESTERN CANADIAN RESOURCE PLAYS Two-Day Workshop

Overview

This applied exploration and development oriented seminar provides an overview of current and prospective resource plays in Western Canada, including play-specific geology, activity, economics, resource estimates and ranking. To facilitate participant's understanding, the course further incorporates a review of Western Canada land and royalty systems, geological context, exploration and development history and conventional versus unconventional reservoirs.

The course is designed for exploration and new ventures managers, geologists, geophysicists, engineers and senior decision makers from E&P companies looking to enter Canada and wanting to identify and understand the key drivers and metrics for resource play opportunities.

The course includes an in-depth, illustrated technical manual, delivered in both hard copy and digital format.

Course Objectives

- Provide a regional context through a brief overview of the resource plays in the WCSB
- Provide a more detailed review of select WCSB resource plays, including what each play has to offer in terms of the rocks and fluids
- Provide a ranking of select WCSB resource plays against each other and US analogs
- Provide high level economic metrics such as drilling and completions costs, type curves and EUR for a select number of plays
